Introduction

This project aims to develop a fully functional restaurant website that allows users to view the menu, place orders, and contact the restaurant. The website was created as part of the **IT271** course to apply **HTML**, **CSS**, **JavaScript**, **PHP**, and **MySQL** skills in a real-world web application.

Project Objectives

- Create a responsive restaurant website.
- Display menu items dynamically using PHP.
- Allow users to submit contact messages.
- Store order and feedback data in a MySQL database.
- Improve teamwork and project development skills.

Tools & Technologies

- **HTML5** – Structure
- **CSS3** – Design
- **JavaScript** – Interaction
- **PHP** – Server-side
- **MySQL** – Database
- **XAMPP** – Server
- **VS Code** – Coding
- **GitHub** – Collaboration

Implementation

➤ Front-end

HTML:

The HTML structure defines the layout of the website.

In **index.html**, a navigation bar, offers section, and footer were implemented. In **contact.html**, a contact form with input fields for name, email, and message was created. All images and text content were placed using semantic HTML tags.

50        });
51      </script>
52    </body>
53  </html>
```

CSS :

CSS was used to **style** all website components. A gradient background was applied across the pages. Flexbox was used to align content. Buttons, cards, and form inputs were styled using border-radius, box-shadow, hover effects, and custom colors.

General:

```
1  /* general */
2  h1 {
3      text-align: center;
4      border: 2px solid rgba(245, 245, 245, 0);

29     margin-top: 20px;
30 }
31 nav {
32     text-align: center;
33     margin: 20px;
34 }
35 nav a {
36     text-decoration: none;
37     color: rgb(138, 69, 69);
38     font-weight: bold;
39     margin: 0 10px;
40 }
```

JS:

JavaScript was used to add interactivity.

In **contact.html**, JavaScript was used to validate the form by preventing default submission and showing a confirmation message.

```
1 <script>
2   document.addEventListener('submit', e => {
3     if (e.target.matches('form')) {
4       e.preventDefault();
5       alert('Send ✓');
6       e.target.reset();
7     }
8   });
9 </script>
```

➤ Back-end

PHP

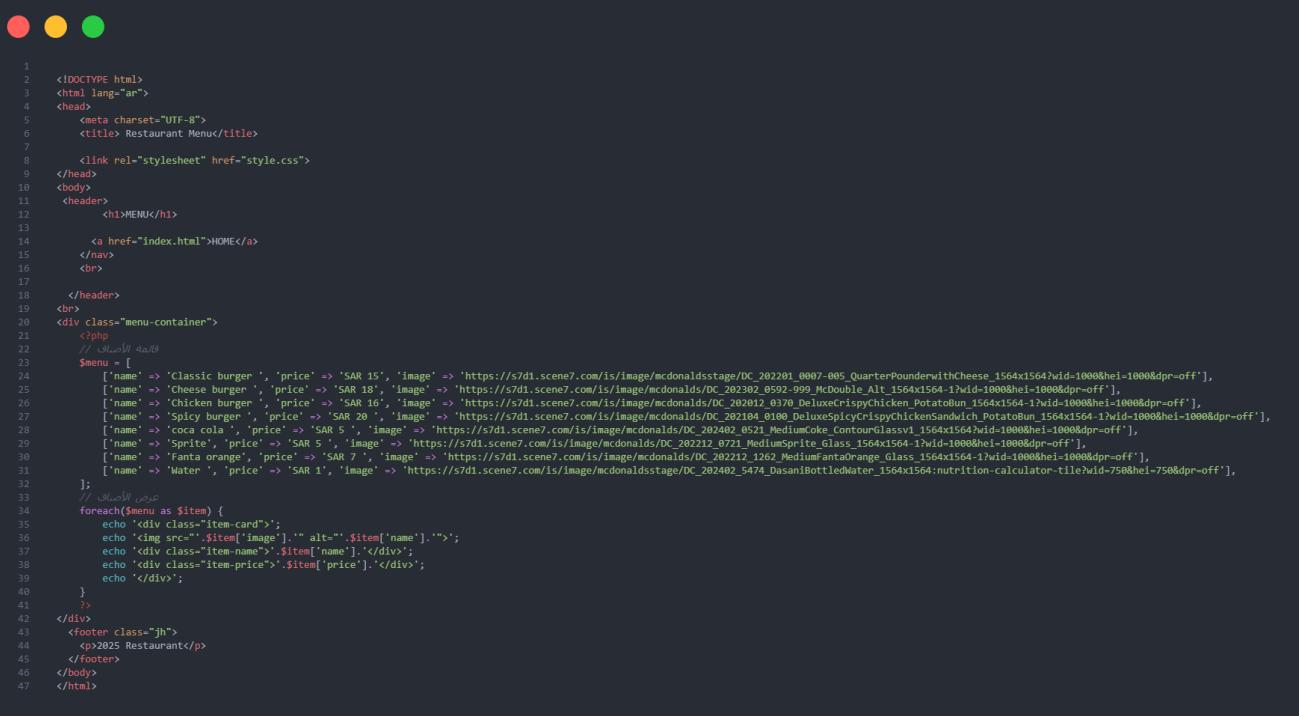

was used to build the menu section dynamically.

Instead of writing each menu item manually in the HTML, an array was created to store all items along with their details.

In menu.html, the PHP code defines an array that contains each food item with its name, price, and image link.

After that, a foreach loop is used to automatically generate the HTML structure for every item in the list.

Menu:

```
1  <!DOCTYPE html>
2  <html lang="ar">
3  <head>
4      <meta charset="UTF-8">
5      <title> Restaurant Menu</title>

45     </footer>
46 </body>
47 </html>
```

Order:

This code displays an order form where the user enters their name, phone number, item, and quantity. When the form is submitted, PHP receives the data and shows a confirmation message with the order details. If no data is submitted yet, the form appears for the user to fill out.

```
1  <!DOCTYPE html>
2  <html lang="ar">
3  <head>
4      <meta charset="UTF-8">
5      <title>Order</title>
6      <link rel="stylesheet" href="style.css">
7  </head>
8  <body>

Database :

A database was created to store and manage all the data used in the restaurant system.

Several tables were designed, and each table has a specific purpose such as storing users, menu items, orders, and reservations.

MySQL was used to structure the data, and each table includes fields that describe the information it holds.

Below is an overview of the database tables along with a simple explanation of what each table does.

```
1  -- جدول المستخدمين
2  CREATE TABLE users (
3      id INT AUTO_INCREMENT PRIMARY KEY,
4      name VARCHAR(100) NOT NULL,
5      email VARCHAR(100) UNIQUE NOT NULL,
6      password VARCHAR(255) NOT NULL
7  ) DEFAULT CHARSET=utf8 COLLATE=utf8_general_ci;
8
9  -- قائمة الطعام
10 CREATE TABLE menu_items (
11     id INT AUTO_INCREMENT PRIMARY KEY,
12     name VARCHAR(100) NOT NULL,          -- اسم الطبق بالعربية
13     price DECIMAL(10,2) NOT NULL,        -- وصف الطبق بالعربية
14     description TEXT                   -- التفاصيل
15 ) DEFAULT CHARSET=utf8 COLLATE=utf8_general_ci;
16
17 -- الطلبات الخارجية
18 CREATE TABLE orders (
19     id INT AUTO_INCREMENT PRIMARY KEY,
20     customer_name VARCHAR(100) NOT NULL,
21     email VARCHAR(100) NOT NULL,
22     delivery_time DATETIME NOT NULL,
23     payment_method VARCHAR(50) NOT NULL,
24     status ENUM('قيد التنفيذ', 'مكتمل', 'ملغي') DEFAULT 'قيد التنفيذ' -- قيد التنفيذ
25 ) DEFAULT CHARSET=utf8 COLLATE=utf8_general_ci;
26
27 -- الحجوزات
28 CREATE TABLE reservations (
29     id INT AUTO_INCREMENT PRIMARY KEY,
30     customer_name VARCHAR(100) NOT NULL,
31     email VARCHAR(100) NOT NULL,
32     guests_count INT NOT NULL,
33     reservation_date DATE NOT NULL,
34     reservation_time TIME NOT NULL,
35     status ENUM('قيد التنفيذ', 'مكتمل', 'ملغي') DEFAULT 'قيد التنفيذ' -- قيد التنفيذ
36 ) DEFAULT CHARSET=utf8 COLLATE=utf8_general_ci;
```

db.php:

```
1 <?php
2
3 $servername = "localhost";
4 $username = "root";
5 $password = "";
6 $dbname = "marina_luxe";
7
8 $conn = new mysqli($servername, $username, $password, $dbname);
9
10 if ($conn->connect_error) {
11     die("فشل الاتصال بقاعدة البيانات" . $conn->connect_error);
12 }
13
14 $conn->set_charset("utf8");
15
16 //إضافة حجر جديد
17 function ($conn) {
18     ($الاسم, $البريد, $عدد_الهاتف, $التاريخ, $الوقت)
19     $stmt = $conn->prepare("INSERT INTO reservations (customer_name, email, guests_count, reservation_date, reservation_time) VALUES (?, ?, ?, ?, ?)");
20     $stmt->bind_param("ssiss", $الاسم, $البريد, $عدد_الهاتف, $التاريخ, $الوقت);
21     return $stmt->execute();
22 }
23 //إضافة طلب خارجي
24 function ($conn) {
25     ($الاسم, $البريد, $وقت_التوصيل, $طريقة_الدفع)
26     $stmt = $conn->prepare("INSERT INTO orders (customer_name, email, delivery_time, payment_method) VALUES (?, ?, ?, ?)");
27     $stmt->bind_param("ssss", $الاسم, $البريد, $وقت_النوصيل, $طريقة_الدفع);
28     return $stmt->execute();
29 }
30 //عرض الحجوزات
31 function ($conn) {
32     return $conn->query("SELECT * FROM reservations ORDER BY reservation_date DESC");
33 }
34
35 //عرض الطلبات
36 function ($conn) {
37     return $conn->query("SELECT * FROM orders ORDER BY delivery_time DESC");
38 }
39
40 //عرض القائمة
41 function ($conn) {
42     return $conn->query("SELECT * FROM menu_items ORDER BY id ASC");
43 }
44 ?>
```

Conclusion

The project helped us apply web development concepts and improve teamwork skills. We successfully developed a functional restaurant website that meets the basic requirements of an online food service system.
